*It does what it says on the cover, If like me you had an awful time understanding maths in school (pre 1980's) and you now need to get to grips with the subject (kids homework getting harder!) then Understanding Maths by Graham Lawler is a 'must have book'.*

*The beauty of it is, all my questions are answered in a way that makes the subject interesting. Graham Lawler: you are a hero.*

*This book has changed my whole attitude to a subject that I hated at school and have never had any confidence in.*
